

# Wat.Edu newsletter 04/2020

## Wate.Edu - TESTING PHASE!

Since the new Year 2020 begun, we started gradually testing the proposed non formal education approach of the first part of project, in which we designed interactive activities for pupils. Testing is at an advanced stage and so far we have only received positive feedback. For example, pupils from the Ostrava, ZŠ Dvorského, primary school, were asked about their experience with Wat.Edu and here are the answers: „I found some activities difficult. It’s something different than typical lesson at school and I really enjoyed them.” (Dominik J.), „It is for me funny and interesting. I have learnt information that I have heard for the first time.“ (Veronika L.). We are really happy to know about pupils enthusiasm and it helps us to continue with the work!

## 4xI = Wat.Edu

### Interactive

We experiment with water and its properties !

### Innovative

We use formal and non formal way of education!

### Interdisciplinarity

We found the way how to communicate throught 4 subjects!

### Involvement

Our pupils are active participants of learning!
