How to use the dictionary

Topics devison

The dictionary is divided into several environment and ecology related categories. You can check the dictionary's content list and go to a specific page where you will find the list of related words in English.

Dictionary cards

Each word from the list of topic words in English has its own card with a picture, where you can find translations in all the other languages - Czech, English, Greek, Latvian, and Turkish

Activities - recommended activities

In the chapter "Activities," you will find recommendations for activities you can do with the dictionary in the classroom. The suggested activities cover English language lessons, biology, environmental education, media education and international cooperation

Activities

English Language

Back to the board

Pupils can work in pairs or small groups and explain the words from the cards to each other in English. The one who guesses the word gets the card, and the student with the most cards wins the game. This can help them not only to learn vocabulary connected to the environment and nature but they also get to practice their communication skills.

Vocabulary bingo

Create bingo cards with words from the glossary. The teacher calls out the definitions or describes a situation connected to the word and pupils mark the words on their cards. The first one who completes a row wins.

Story writing

Select a few vocabulary cards from the dictionary and tell the pupils to use these words to write short stories. They can create stories about nature or specific environmental problems.

Poster creation

Groups of pupils can create posters on a specific topic using the words from a specific area in the dictionary. Each group can focus on one theme (for example water saving, climate change) and present it to their classmates in English.

Activities

Biology

Local flora and fauna

Pupils can compare the words from the cards with plants and animals that can be found in their country. For example, which bird or plant species are endangered in the Czech Republic, Latvia, or Greece?

Environmental Education

Sustainability project

When pupils work on a sustainability project in their town or school, they can use the vocabulary from the dictionary as a source of inspiration.

Our environmental footprint

Pupils use the vocabulary to evaluate the school's environmental footprint, for example, they can focus on water and energy-saving, waste management, recycling. They can also present recommendations for improvements.

Activities

Media education

School campaign

Pupils can create informational campaigns for social media using the vocabulary from the dictionary. Campaigns can promote for example water saving, recycling, and other ecological activities.

Eco-slogans creation

Pupils use the dictionary as inspiration and create eco-friendly slogans that can be used in posters or social media campaigns to raise awareness about environmental issues like recycling or energy conservation.

Activities

International cooperation

Quiz exchange

Pupils from different countries can send each other quizzes based on the words from the glossary. This will improve their environmental awareness and also offer an opportunity to communicate and get to know each other better.

Online lessons

Pupils can organize online sessions where their classmates from different countries present specific topics from the dictionary and share how these issues are tackled in their country. They can also compare how environmental protection works in their country.

Virtual field trips

Pupils from different countries can take their peers on a virtual field trip (through video, photos, or live streams) to an important local environmental site and use vocabulary from the dictionary to describe what they see and what are the most significant environmental issues of the area.
